

Joe Francis G. Silverio

San Jose del Monte, Bulacan • +63 994 590 2095 • joe francis.silv@gmail.com

silv-error.github.io/portfolio/

Profile Summary

- IT undergraduate pursuing Bachelor of Science in Information Technology
- Hands-on experience in networking, software development, and ethical hacking
- Proficient in Cisco IOS configuration, network troubleshooting, and secure system practices
- Contributed to FCPC Software Development team on collaborative application projects
- Active participant in Hackathons and Capture-the-Flag (CTF) competitions
- Strong analytical thinking, team collaboration, problem-solving, and continuous-learning mindset

Skills

- **Programming:** Python, Node.js, Express.js, React, MongoDB, PostgreSQL, RESTful APIs
- **Networking:** TCP/IP, VLSM, Routing & Switching, VLANs & Inter-VLAN, LAN & WAN, STP, HSRP, ARP, ICMP, DNS, DHCP, NAT, ACLs, Port Security
- **Cybersecurity:** Planning & Scoping, OSINT, OWASP Top 10, Network & Host Discovery, Service Enumeration, Traffic Capture & Analysis, API & Web Application Security Testing, Network & System Exploitation
- **Software:** Git/GitHub, Bash/Shell, CMD/Powershell, Recon-ng, Nmap, Burp Suite, Wireshark, Scapy, BeEF, SET, Ettercap, Tcpdump, Shodan, Kali Linux, Windows, Packet Tracer, VS Code, Postman
- **Languages:** Filipino, English

Experience

First City Providential College

Francisco Homes, SJDM, Bulacan

Member of FCPC/CSS Extracurricular Software Development Team

Nov 2024 — Present

Collaborate with a team of developers to design, develop, and maintain software projects beyond the academic curriculum.

First City Providential College

Francisco Homes, SJDM, Bulacan

Cisco Academic Proctor (Peer Facilitator)

January 2026

Assisted students during hands-on networking exams by evaluating configurations and troubleshooting tasks. Provided guidance and feedback to help improve their technical skills and understanding of Cisco networking concepts.

Projects

Peekabook

- An OSINT (Open Source Intelligence) tool that extracts real Facebook names from shared reel or post links. Demonstrates information gathering techniques for security assessments and digital investigations.
- **Technologies:** Python, Burp Suite

Packet Sentinel

- PacketSentinel is a proof-of-concept Python tool that demonstrates simple packet-rate based blocking. It uses Scapy to sniff IP traffic, computes per-source packet rates (packets/second). This project is intended for educational and lab use only.
- **Technologies:** Python, Scapy

Smart Solar Power Monitoring (Website & Mobile)

- Developed a smart solar energy management system that monitors battery levels and automatically distributes electricity into 4 sections to optimize power usage. The system prioritizes critical loads and sheds non-essential sections as the battery level decreases, ensuring efficient energy utilization.
- **Technologies:** Node.js, Express.js, React.js & React Native, Expo, Supabase

Discord VC Auto Permit

- A custom DOM manipulation script that automatically permits selected users to join your private custom voice channel on Discord.
- **Technologies:** Vanilla.js

Akai (Discord Bot)

- Akai is a phishing and malware tool connected to a Discord bot that allows attackers to control a target's computer using bot commands.
- **Technologies:** Python, Discord

Scriptify

- Developed a web application that allows users to upload PDF documents and automatically converts the text into downloadable MP3 audio files. The system uses text-to-speech processing to extract and transform written content into high-quality spoken audio, enabling users to listen to documents instead of reading them.
- **Technologies:** Python, Flask

Stream Cove

- Developed and managed a free movie and TV series website integrated with an AI-based recommendation system. The platform analyzes user preferences, watch history, and engagement patterns to deliver personalized content suggestions. Designed to improve user experience by helping viewers discover relevant films and series efficiently, while maintaining an organized and scalable content platform.
- **Technologies:** Node.js, Express.js, React.js, MongoDB, Tailwind, Deepseek, RESTful API

Class Scheduling System (DBMS Final Project)

- Developed a web-based class scheduling system with role-based access control for students, professors, and administrators. The platform allows administrators to manage courses, schedules, rooms, and user accounts; professors to view and manage their assigned classes; and students to view enrolled courses and class timetables.
- **Technologies:** Node.js, Express.js, React.js, MongoDB, Tailwind, Deepseek, RESTful API

Spontyfind

- Developed a mobile application that helps users discover hidden gems and small local restaurants by searching and browsing nearby places. The app provides detailed restaurant descriptions, allows users to save favorite locations, and displays them on an interactive map for easy navigation. SpontyFind enhances food discovery by connecting users to unique dining spots that are often overlooked by mainstream platforms.
- **Technologies:** Node.js, Express.js, React.js, MongoDB, Tailwind, Deepseek, RESTful API

Extracurricular Activities

Cisco Student Regional Congress Cisco CCNA Capture-the-Flag Competition

Holy Angel University
January 2026

Our team emerged as the champion in the CISCO Networking Academy Capture-the-Flag competition, showcasing strong skills in network security, problem-solving, and practical cybersecurity challenges.

Development Academy of the Philippines NextGenPH: Youth Innovators Reimagining Public Service Contest

Development Academy of the Philippines
November 2025

Developed a mobile application recommending nearby tourist spots using AI-driven personalized suggestions, demonstrating skills in mobile development, AI integration, and user-focused design.

Hexcore Labs PH AI Hackathon - Cyber Defenders

Asian Institute of Management
October 2025

Participated in AI Hackathon by Hexcore Labs PH at the Asian Institute of Management, developing an automation tool to protect Gmail from malicious emails, demonstrating skills in cybersecurity and AI integration.

First City Providential College 1st Semester - Program Orientation

Francisco Homes, SJDM, Bulacan
November 2025

Presented team-developed software projects at the school program orientation as part of the FCPC/CSS Extra-Curricular Software Development Team, showcasing collaboration, technical skills, and real-world applications.

Regional Assembly on Information Technology Education (RAITE) 2024 Hackathon Competition

Angeles University
November 2024

Participated in the RAITE 2024 Hackathon, collaborating on technology-driven solutions with a focus on secure system design, problem analysis, and applied cybersecurity concepts. Gained hands-on experience in threat-aware development, teamwork under time constraints, and exposure to emerging technologies in a competitive environment.

Certificates & Awards

- **CNA CTF Champion: CCNA Capture-the-Flag CNA** — Cisco Network Academy, January 2026
- **Hackathon: Certificate of Appreciation** — Development Academy of the Philippines, November 2025
- **AI Hackathon: Certificate of Appreciation** — HexcoreLabsPH, October 2025
- **Python: Certificate of Accomplishment** — HackerRank, October 2025
- **REST API: Certificate of Accomplishment** — HackerRank, October 2025
- **CCNAv7: Enterprise Networking, Security, and Automation** — Cisco Network Academy, August 2025
- **Successful completion of 6 projects: Certificate of Recognition** — First City Providential College, May 2025
- **CCNAv7: Switching, Routing and Wireless Essentials** — Cisco Network Academy, July 2024
- **CCNAv7: Introduction Network** — Cisco Network Academy, March 2024

Education

First City Providential College Bachelor of Science in Information Technology

Francisco Homes, SJDM, Bulacan
Expected Graduation: May 2026

Coursework: Cisco IOS Configuration, Software Development, DBMS, System Administration, Security

Capstone: Smart Solar Energy Management System with Zone-Based Power Allocation for Efficient Energy Use

San Jose del Monte National Highschool Information and Communication Technology Computer Programming Strand

Yakal, SJDM, Bulacan
July 2022
